

Building Integrated PV system for housing and residential use. PORTRAIT and LANDSCAPE

Aesthetic Design: Sole-In Home is designed to fit perfectly into your roof and make your installation invisible.

Easy to install: the concept itself was developed for and by installers. Easy and quick to fix make it very time saving for your workers.

Strong and reliable: using the best material, insuring a long-term life of your system, thanks to the profile in anodised aluminium and stainless steel fastenings screw.

Modulable: can be used in portrait or landscape, Sole-In Home is adapting naturally to all type of steel or wood beam.

Well-ventilated: Sole-In Home leaves enough space between modules and the water isolation panels in aluminium, enabling air circulation for a better aeration.

Sole-In Home exists in black or red coloured version including modules and mounting system, for a perfect integration.

A CP-Solar brand

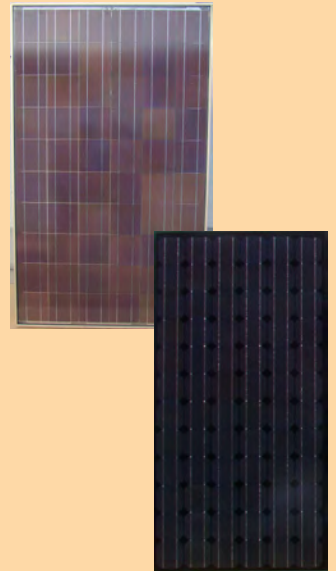

CP-Solar +
